

Project Development Phase Performance Test

Date	14 February 2026
Team ID	LTVIP2026TMIDS80295
Project Name	Visualization tool for electric vehicle charge and range analysis
Maximum Marks	

Model Performance Testing:

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	 The screenshot shows the Tableau Desktop Public Edition interface. The main view displays a table titled 'Cheapestelectriccars-EVD...' with 43 fields and 497 rows. The table columns are: Name, Subtitle, Acceleration, and TopSpeed. The table lists various electric vehicle models and their specifications.
2.	Data Preprocessing	1.FastChargeSpeed: Initially few rows in this column are filled with '-', We converted those into null by creating a new calculation field FastChargeSpeed_clean 2.PriceinGermany: Initially few rows in this column are filled with N/A and all rows are have inappropriate currency symbols ,We converted those N/A into null and removed the currency symbol by creating new calculating field PriceinGermany_clean 3.PriceinUK: Similarly in PriceinUK filed also some rows are filled with N/A and have inappropriate currency symbol, we converted those N/A into null and removed the currency symbol by creating new calculation field PriceinUK_clean

3.	Utilization of Filters	Filters such as Brand,BodyStyle,PowerTrain are used while creating visualizations
4.	Calculation fields Used	1. Car_brands_India: This is a calculation field we have created for identifying electric car brands in india using formula SPLIT([Car]," ",1) 2. Bodystyle_count: This is another calculated field we have created for identifying seat count of particular car by using formula COUNT([BodyStyle]) 3.Count_Powertrain: We have created another calculated filed called Count_Powertrain using formula COUNT([PowerTrain])
5.	Dashboard design	No of Visualizations / Graphs - 5
6	Story Design	No of Visualizations / Graphs -4
